

Table S31: Percent of GT8++IgG+ B cells that are KO- magnitude testing between non-baseline time points for the treatment group, for frozen PBMC samples. Testing was done using Wilcoxon signed-rank test for paired data (two-sided, $\alpha = 0.05$) and p values less than 0.05 are highlighted.

	Number of Pairs	Median (Range)	P Value
20μg			
Wk8 (V07) vs. Wk10 (V08)	17	35.1955 [18.3673, 64.7059] vs. 16.7272 [7.4382, 40.5232]	<0.0001
Wk8 (V07) vs. Wk16 (V10)	18	33.9485 [18.3673, 64.7059] vs. 23.0036 [9.2417, 47.6780]	0.0010
100μg			
Wk8 (V07) vs. Wk10 (V08)	17	36.0902 [19.2000, 68.1992] vs. 16.9261 [5.1574, 42.5123]	<0.0001
Wk8 (V07) vs. Wk16 (V10)	16	36.6381 [19.2000, 68.1992] vs. 22.4774 [5.6008, 52.5964]	<0.0001
